

# The Future Runs on Agentic Access, Secure Your Non-Human Identities

Access in the enterprise has quietly become **machine-first. Non Human Identities** (NHIs) like service accounts, keys, roles and automations, and now **AI agents**, outnumber employees and hold powerful access to critical systems. AI agents layer on top of an already complex web, using NHIs to read customer data, take action, and influence production.

This access layer is invisible to traditional IAM and PAM, over-privileged and rarely explained. Identity security in the age of AI is far more than an IT hygiene issue; it's a **board-level question of risk, accountability, and control.**

**Oasis Security is the identity control plane for this new reality**, providing one platform to safely adopt AI, reduce identity risk, and govern the systems that run the enterprise.

## The Challenges

-  Creation is unbounded  
Every business user spins up dozens of agents & NHIs (on-prem, cloud, and SaaS)
-  Visibility is fragmented  
Identities, secrets, and entitlements are scatter, without a single view.
-  Overpermissive by default  
Broad access is the path of least resistance; least privilege is hard to maintain.
-  Policy stops at creation  
No runtime checks mean multi-hop access flows go ungoverned.
-  AI breaks the governance model  
Manual ticketing can no longer scale; Copilots / agents outpace IAM's ability to control.

## Introducing: Oasis Security Non-Human and Agentic Access Management

Oasis gives organizations **one place to understand, govern, and secure every non-human identity**, from long-lived service accounts and keys built up over years, to the AI agents teams are spinning up today.

With Oasis, organizations can:

- **See** every AI agent & NHI in one inventory
- **Understand** what each identity can access
- **Enforce** policies consistently across systems
- **Grant** AI agents precise, short-lived access
- **Track** every action with end-to-end accountability
- **Manage NHI lifecycle**, from creation to retirement

This unified approach lets companies adopt AI safely, reduce identity risk, and keep the business moving fast, with **security built in from the start.**

## Why Oasis

### Actionable context

See every agent and NHI, build context needed to prioritize risk, and fix issues, all in one view.

### End-to-end lifecycle

Guardrailed provisioning, auto-issuance and safe rotation, scheduled recertification and zero-residue cleanup.

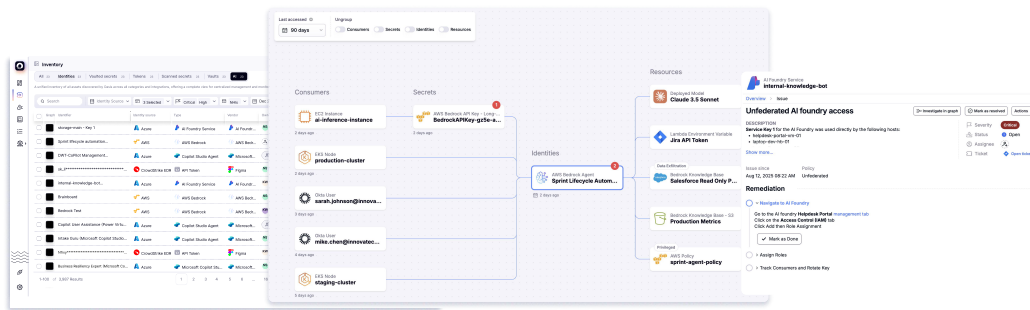

### Battle-tested, enterprise ready

Proven in regulated, hybrid environments with audit-ready controls and clear, safe rollout plans.

## Value at a Glance

- **Streamlined Creation:** Govern every access from day one with self-service provisioning blueprints that require owner, purpose, expiry and least-privilege.
- **Continuous discovery and unified inventory:** Map all agents, NHIs, secrets, entitlements, and usage in one place, by integrating across on-premises, clouds, SaaS, and vaults.
- **Ownership and Hygiene by default:** Mitigate risk and boost compliance by intelligently suggesting owners, detecting unused access, and confidently cleaning up your environment.
- **Secret and token management:** Reduce attack surface with policy-driven, safe rotation of secrets, keys, and tokens; promote auto-federation, migrating to short-lived, scoped tokens when possible.
- **Threat detection:** Prevent breaches by detecting drift, secret misuse, privilege escalation, and multi-hop anomalies at runtime; auto-contain with just-in-time blocks and alerts.
- **Agentic access governance:** Transform business velocity with purpose-bound, short-term access for agents; live monitoring for drift and instant block on violations.

## Our customers achieved incredible outcomes

### Audits & Compliance

Fortune-500 bank passed OCC/SEC/SOX/Fed audits; \$5M+compliance burden eliminated.

### Outage Prevention

Fortune-500 insurer proactively fixed an expired secret, preventing outage across 50% of prod workloads.

### Risk reduction

Fortune-50 healthcare company found and rotated an exposed credential, preventing a breach and avoiding regulatory fallout.

### Market Reality

- 92% of F500 leverage AI agents/models
- 79% run active agent projects
- 81% expect AI to reshape their industry in 5 yrs

## Own Your Non-Human Identities. Power Your Agentic Access

# OASIS

Identity security for the Agentic Access era.
